Installation Instructions

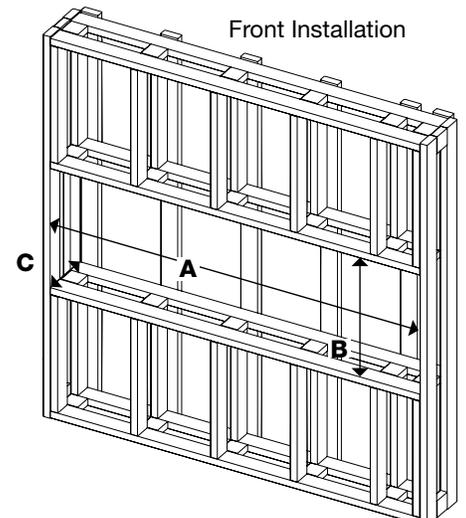

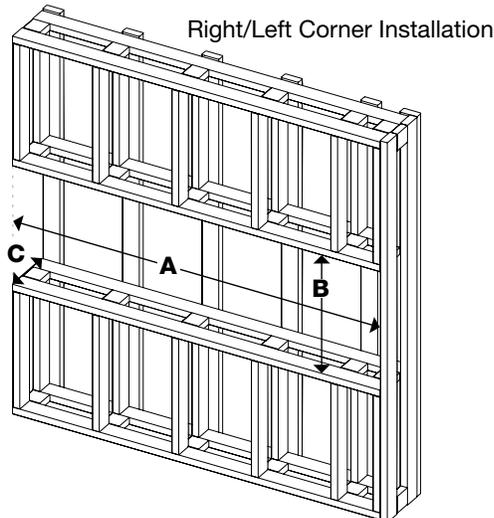

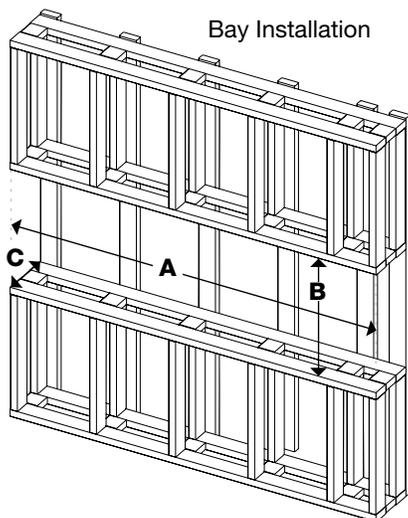

Width A	Height B	Depth (minimum) C
49-1/2" (125.7)	24-1/4" (61.6 cm)	11-5/8" (29.5 cm)

The dimensions are the same for single-sided, two-sided, or three-sided installations.

CAUTION: This fireplace is **NOT** load-bearing. Ensure the opening for the fireplace is framed in such a way that the weight of the building materials will not create pressure on the top of the fireplace.

NOTE: Wiring is performed at the top right back corner of the firebox. Plan the framing to allow routing the power cable to this location.

NOTE: It is recommended that the bottom of the unit be mounted between 5" (13 cm) and 40" (102 cm) from the ground to maintain an optimized viewing angle of the flame.

Framing / Installation:

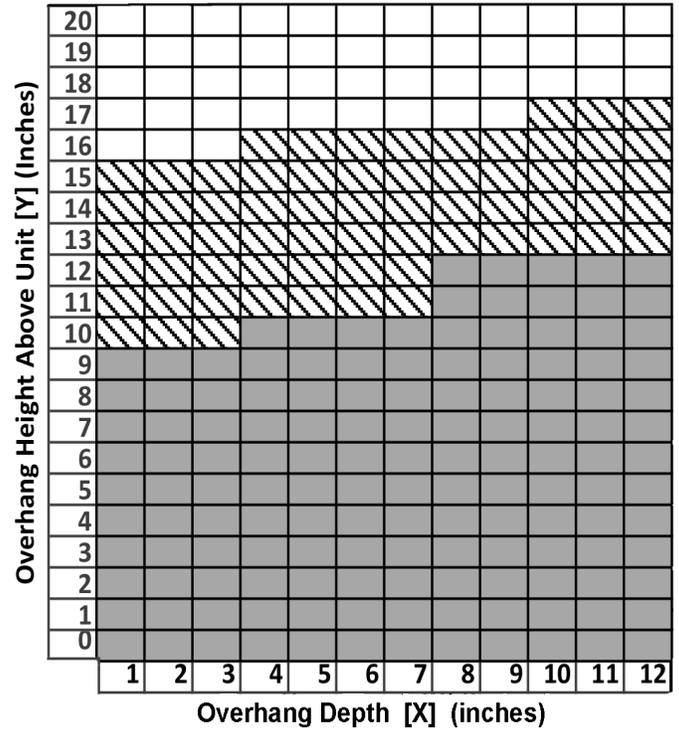

Installation Recommendations for Overhanging Objects

For overhanging temperature-sensitive objects, such as a television, a mantel, or artwork, always follow the recommendations provided by its manufacturer for installation over a heater.

Figure 1 provides the overhang clearance recommendations for the fireplace. Areas above the fireplace are marked as follows:

- Solid gray box (■) is subject to temperatures greater than 65°C (149° F).
- Hatched box (▨) is subject to temperatures greater than 40°C (104° F).
- Clear box (□) is subject to temperatures less than 40°C (104° F).

Outdoor Installation

This electric fireplace is suitable for installation in outdoor areas, sheltered by an overhang to protect against direct water ingress. Installation on ground-fault protected circuit is recommended. All electrical connections and routings shall be in accordance with local building code requirements.

To maintain warranty coverage, the overhang must follow this rule:

- Maximum Height $\leq 3 \times$ Projection Length, where:
- Maximum Height is measured vertically from the bottom of the fireplace to the bottom edge of the overhang
- Projection Length is measured from the exposed face of the fireplace to the parallel edge of the overhang
- For example, if the overhang is 9 feet above the bottom of the fireplace, it must extend a least 3 feet outwards on all sides
